IMGASA NON-LETHAL SELF DEFENSE

2011

Warning – Using any other carbine for training or shooting pepper balls is dangerous. Hot pepper powder balls that break inside the gun will contaminate the shooter's face and make the shooter less able to defend himself by affecting his vision and breathing. Please consider what can happen using inferior equipment for self-defense.

TIBERIUS T9.1 “RANGER FS” MODEL NON-LETHAL CARBINE SHORT AND MEDIUM AND LONG RANGE MULTIPLE TARGETS – CROWD CONTROL – FIGHT CONTROL – RIOT CONTROL

The carbine uses 2 propulsion systems, with the user choosing in advance which system. Only one propulsion system can be used at a time. First is a magazine with a 12 gram disposable CO2 cartridge that powers up to 16 shots before needing replacement with an 8 ball ammunition capacity. The second is a butt stock with a High Pressure Air (HPA) bottle that can shoot 200 shots using a hopper. Highly accurate with an advanced regulator, adjustable velocity 250-350+ fps, effective range 75 feet, maximum range 150 feet.

These are examples of the uses: (1) Hopper with 200 pepper balls powered with HPA. Control a prison riot or concert fight. Intimidate observers watching from a distance planning a break-in of a warehouse. Protect a large parking lot. (2) Using only the 8 shot magazine intimidate observers and the guard cannot shoot too many expensive pepper balls if confronted by aggressors. (3) Load the magazine with glass breaker rounds or pain compliance rounds and the hopper with pepper balls. Power with HPA or 12 gram CO2. SHOOT GLASS BREAKERS and break car window or SHOOT PAIN COMPLIANCE BALLS with magazine. ROTATE BARREL and THEN SHOOT PEPPER BALLS from low profile hopper.

Tiberius T9.1 Ranger FS Includes Carbine, 2 Magazines, 1 Magazine Belt Holster, HPA Bottle With Butt Stock, Red Dot Scope, Foregrip, SCUBA Fill Adapter, Low Profile Hopper, 20 CO2 Cartridges and 500 Practice Balls.
